

Question:

How do I find the URL for web browser access in the SLD (System Landscape Directory)? I want to use SAP Business One online when I am not on the company network.

Answer:

URL Web Browser: SLD > Services > Browser Access Service

The provided answer is correct: for security reasons, it is not possible to directly access the SAP Business One Web Client or Browser Access from outside your company network. Your IT team must configure a secure connection. The simplest method is Port Forwarding, but more secure and recommended alternatives like a VPN or a reverse proxy should be strongly considered.

The screenshot shows the SAP System Landscape Directory (SLD) interface. The top navigation bar includes tabs for DB Instances and Companies, Logical Machines, Components, **Services**, Security, External Mapping, Global Settings, and Audit Logs. The 'Services' tab is active, displaying a list of services. The 'Browser Access Service' is highlighted in the list, and its corresponding URL is shown in the 'Link' column.
