

Question:

Resolving 'Not Permitted to Perform Action' (License Issue)

I'm trying to create an A/P Invoice in SAP Business One, but I receive the error message: "You are not permitted to perform this action [Message 200-30]". Why is this happening?

Resolution:

To resolve this issue and gain the ability to create A/P Invoices (or other restricted actions), you will require a different user license type that includes this functionality.

- **Review License Chart:** Refer to your SAP Business One license chart (provided by your SAP partner or found in SAP documentation) to understand the capabilities of each license type.
- **Contact Your Administrator/SAP Partner:** Discuss your requirements with your SAP Business One administrator or SAP partner. They can help you determine the appropriate license type for your role and assist with the process of upgrading or changing your license.

Important Note: Even if a user has "Full Authorization" in their General Authorizations, the system will still enforce license type restrictions. If your license does not permit an action, no amount of authorization settings will enable it.
